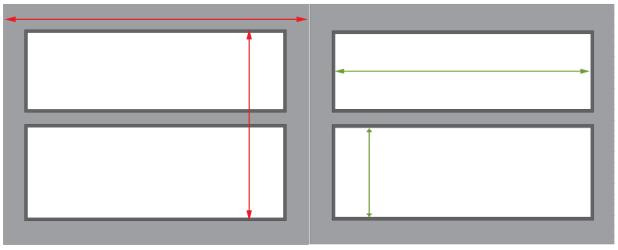
Window Measurement Sheet

Measuring your windows for window film is easy! Just follow these simple guidelines:

DO measure as accurately as possible. Under or over measuring can vastly change the price of the order. You may round up to the next quarter inch, but no more. Do not submit unconfirmed or estimated measurements!

DO measure each pane of glass individually. Often windows next to or over one another that look the same size can be different widths and/or heights.

DO NOT measure groups of windows or entire openings as a single window. We need to know the size of each pane of glass.



The red arrows show examples of incorrect width and height measurements.

The green arrows show examples of correct width and height measurements. Measure each pane individually!

ROOM	WIDTH	HEIGHT	NUMBER THIS SIZE

When finished, email the dimensions to info@precisefilm.com with a short description of what you would like the film to do. We will get back to you with a proposal as soon as possible. That's it!
